New Features

- A new Home Page Dashboard displays widgets such as Leave Balances, Employee Leave Requests, Timesheet Statuses, Clock In Statuses, and more based on the role of the user logged in (Employee, Supervisor and Administrator).

Improvements

- Timestamps are now based on the Employee Profile's Time Zone setting if this feature is enabled for the site.
- Client users are no longer included in the Active User Count from the Employee Management page in order to match customer's monthly active user count billing totals.

Bug Fixes

- The error message "Failed to get imported due to: Incorrect format for SSN" will be generated for employee import files that contain an invalid formatted social security number in the SSN column.
- The Holiday Schedule page will show the correct hourly increment values entered and no longer round up for values over one decimal space.
- Only active employees for the group criteria selected from the Manage Leave Requests page will display when the Apply Filter button is selected.
- Hours entered for Holiday Schedules are now populating on timesheets for specific leave configurations set for Charge Codes.
